GIS System Architecture Design

With 70% of all municipalities' information linked through geography, agencies are discovering that Geographic Information Systems (GIS) solutions and deployments are formidable tools in the struggle to increase operating efficiency and improve service delivery. InterDev, an acclaimed IT and GIS services firm, is helping governmental entities of all sizes to develop and manage custom solutions, applications and portals driven by robust, secure, well-governed GIS mapping and analysis systems.

- Organize your data logically using the ArcGIS for Local Government Information Model
- Innovate and design mapping applications that lower operational costs
- Analyze your data using maps, web apps, and dashboards
- Monitor your data in real-time
- Visualize your data in new and interesting ways
- Staff Augmentation model deploys world class GIS departments quickly

Brookhaven Chamber of Commerce Restaurant Story Map

> "I proudly commend InterDev for providing our City with the easy to use Brookhaven GIS WebApp, which allows citizens to access the same information which our Public Works, Community Development, Police and all our departments use to make critical decisions on a daily basis."
>
> *–Former Brookhaven Mayor J. Max Davis*

Award-Winning GIS Creativity and Support

We uncover the current flaws in your

- **A "30,000 Foot Overview" of LiDAR.** Esri 2015 UC Map Gallery Award in the Instructional Map Category. July 2015

- **Building an Enterprise GIS for the Newest City in Georgia.** URISA's Exemplary Systems in Government (ESIG) Award in the Enterprise Systems Category. August 2014

- **Brookhaven's Government Representation.** DeKalb County, Georgia GIS Day Best Map Award. November 2013

Linking Citizens with Solutions

As citizens become familiar with the power of geographically driven websites for information gathering as weather, traffic, nearby shopping deals, and more, they increasingly expect cities to use this smart technology to increase efficiencies and decrease cost. InterDev has years of experience working with local governments to achieve this goal. We are committed to increasing efficiencies and decreasing cost using GIS technology. InterDev's GIS team instills theses values in all the applications we deploy.

InterDev has specialized proficiency in Esri and its ArcGIS Desktop, ArcGIS Server and ArcGIS Online Government. We have been awarded Esri's ArcGIS Online Specialty for our proven track record of developing value-added services, apps and solutions. This expertise provides the high-level competency cities need to build upon Esri's harmonized information model of GIS datasets, web services and maps to bring government operations to life for staff and citizens.

Mobile Applications for iOS and Android

Online and Desktop Application
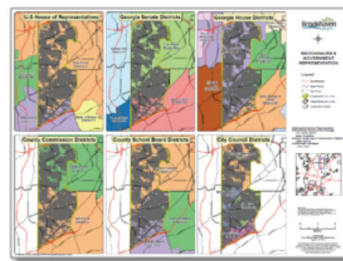

Web Mapping Applications

Online & desktop web mapping applications allow your organization to create intuitive, focused driven maps to increase your day-to-day productivity by giving your managers, staff, and constituents' access to easy-to-read, secure, and authoritative data.

Mobile Technology

Mobile applications allow the field crews access to your organization's secure data in real time. Alternatively, our mobile applications also allow managers to access data being collected in the field, as the data is being collected.

GIS Mapping/Cartography

InterDev's award winning GIS and mapping capabilities allow you to create maps that tell your story clearly. From poster maps to interactive web maps, we can help get your message out.

Visualize your story using your data
